DETAILED ACTION

1. Applicant's election of Species 1, (Figures 4-8) in the reply filed on 1 June 2006 is acknowledged. Specification

3. The substitute specification filed 29 June 2006 is acceptable. The requisite statement concerning "no new matter" can be found in the remarks of the amendment filed 29 June 2006.

Priority

4. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3728

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Betsuyaku (US 6,006,919).

Claim 20: The claim does not invoke 35 U.S.C. 112, sixth paragraph, because the claim provides a list of the structure underlying the means and the detailed recitation of structure for performing the function removes this element from the purview of 35

U.S.C. 112, sixth paragraph); *Cole v. Kimberly-Clark Corp.*, 102 F.3d 524, 531, 41 USPQ2d 1001, 1006 (Fed. Cir. 1996).

Betsuyaku discloses a thin plate supporting container comprising a container body **1**; a lid unit (see Figure 10 and Col. 9, lines 41-43); supporting stands **5**; and body positioning means **4** fixed on the exterior bottom of container **1** and including V-shaped groove plate pieces **9** defining V-shaped grooves (see Figure 5) in three positions and oriented in three different directions (see for example, Figure 7 or Col. 9, lines 51-56). In the embodiment of figures 4-6, Betsuyaku discloses integrally formed slots **3** on the sidewalls instead of separate slotted plates fixed on the sidewalls. However, in the embodiment of Figure 1, Betsuyaku anticipates slotted plates **3A** fixed on the sidewalls of the container (see Figure 1). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the slots of the embodiment of figures 4-6 as removable slotted plates as taught by the embodiment Figure 1 in order to enable variance of the slot sizes and/or part replacement. It has been held that constructing a formerly integral structure in various elements involves only routine skill in the art. *Nerwin v. Erlichman*, 168 USPO 177, 179.

Claim 21: Betsuyaku teaches the use of PBT (see Col. 11, lines 41-43), which as disclosed by the applicant at page 19, line 10 of the substitute specification, is a material having a low surface frictional resistance.

Claim 22: Betsuyaku discloses V-shaped groove plate pieces **9** as detachably mounted (see for example, Col. 11, lines 17-19).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
